

Types of AI Moderation Sections

Last Modified on 02/10/2026 5:06 pm EST

Text

In a Text AI Moderated section, the respondent will see incoming messages and type out their response. The next response from the AI Moderator will only come once the participant has submitted their answer. This option removes the risk of PII from a respondent's camera or voice.

Audio

In an Audio AI Moderated section, the AI Interviewer will read the question to a respondent. The question will be displayed on the screen while the AI Interviewer is speaking. The respondent will verbally respond with their answer to the AI Interviewer. Only their voice is captured; their camera is off.

Video

In a Video AI Moderated section, the AI Interviewer will speak questions to a respondent. The questions will be displayed on the screen while the AI Interviewer is speaking. The respondent's microphone and camera must be enabled before entering the section. Their audio and video will be captured.
